Title: Registration Error for 2-Character Usernames

Reported By: Gokul Patil

Date: August 27, 2024

Environment:

- **Website:** https://try.vikunja.io/register
- **Browser:** Google Chrome Version 114.0.5735.91
- **Operating System:** Windows 10 Pro, Version 21H1

Description: When attempting to create a new account with a username consisting of exactly two characters, the registration process fails, and an error is returned.

Steps to Reproduce:

1. Navigate to the registration page at https://try.vikunja.io/register.
2. Enter a username with exactly two characters (e.g., "gk").
3. Complete the remaining required fields (e.g., email address, password).
4. Click on the "Register" button.

Actual Result: The registration fails, and an error message is displayed: "Invalid data."

Expected Result: The system should:

1. Allow the registration to proceed if two-character usernames are acceptable.
2. Provide a clear, user-friendly error message if the username length is not permitted, such as "Username must be at least 3 characters long."

Additional Information:

- **Screenshots:** Attach a screenshot of the error message if available, especially the one showing "Invalid data" for 1 or 2 character usernames.

Severity: High

Priority: Medium

Notes:

- Usernames with 1 or 2 characters are not accepted, and the error message "Invalid data" is displayed.
- Usernames with 3 or more characters work correctly and allow account creation.
- Verify if the error message "Invalid data" can be improved to indicate that usernames must be at least 3 characters long.

- Ensure that usernames containing numbers (e.g., "abc123"), symbols (e.g., "abc@#"), or a combination of letters, numbers, and symbols are handled correctly.
- This issue is also reproducible on Firefox and Microsoft Edge browsers.
